IECS 103 Introduction to Computer Science Lab I Lab 6

1. A mail order house sells five different products whose retail prices are shown below:

Product Number	Retail price
1	\$2.98
2	\$4.50
3	\$9.98
4	\$4.49
5	\$6.87

Write a C program that reads a series of pairs of numbers as follows:

Product Number, Quantity sold

Your program should use a switch statement and calculate and display the total retail value of all products sold.

2. Use "switch" statement to write a C program to input a date in an abbreviated form and print it out in a formal form. For example,

Input: 10/20, output: 十月二十日

3. Write a C program that prints the following patterns.

(A)	(B)	(C)	(D)
*	******	******	*
**	*****	******	**
***	*****	******	***
****	*****	*****	****
****	*****	*****	****
*****	****	****	****
*****	****	****	*****
*****	***	***	*****
*****	**	**	******
*****	*	*	******

4. 一個 C語言的程式,以畫出多個水平或垂直排列的菱形。(1) 首先讀入一個大於2小於 11的正整數n 以作為菱形的邊長;(2) 讀入變數dir 作為菱形排列的方向, 0 為水平方向, 1 為垂直方向; (3) 讀入一個大於2小於 6的正整數 count 作為菱形的個數。菱形的圖形以 '*' 為邊和 '@' 為內部,兩個相鄰的菱形間隔一個空格。程式執行範例如下:

Enter the side length of the diamond (between 3 and 10): 5

Enter the connecting direction (0: horizontal, 1: vertical): 0

Enter the number of diamonds (between 2 and 6): 4

*	*	*	*

5. 寫一個 C 語言的程式,以畫出多個水平或垂直排列的正方形菱形並十字。(1) 首先讀入一個大於 4 小於 11 的正整數 n 以作為菱形的邊長;(2) 讀入變數 dir 作為菱形排列的方向,0 為水平方向,1 為垂直方向;(3) 讀入一個大於 2 小於 6 的正整數 count 作為菱形的個數。正方形的圖形以 '@' 為邊,菱形的圖形以 '*' 為邊,十字 '+' 為邊,兩個相鄰的正方形間隔一個空格。程式執行範例如下:

Enter the side length of the diamond (between 3 and 10): 5 Enter the connecting direction (0: horizontal, 1: vertical): 0 Enter the number of diamonds (between 2 and 6): 3

Enter the side length of the diamond (between 3 and 10): 6 Enter the connecting direction (0: horizontal, 1: vertical): 1 Enter the number of diamonds (between 2 and 6): 4
